- Utility, shipping and liquid waste services

CIVIL

- Bulk earth works
- Land clearing
- Residential and business developments
- Roads and carpark

Austrans' combined use of equipment and resources gives clients the best results.

With industry-leading project planning, safety procedures and reporting processes we are committed to completing jobs efficiently and effectively.

Austrans specialise in the removal, transportation and disposal of heavy liquids and sludge with minimal impact to site and operational activities.

We also offer site remediation and access upgrades, project management and budget tracking. Our bobcats and excavators are ideal for small on-site jobs, while our machines and earthmoving team can tackle large scale subdivisions and civil works.

Testimonials

“

Austrans played a major role in removing sludge from three lagoons at the Kalbar Water Treatment Plant. They removed more than 1,000 tonnes of sludge in less than two weeks, displaying high standards of safety, quality and workmanship. Staff maintained consistent levels of communication and reporting and allowed us to continue our operations uninterrupted. Austrans had every machine to complete our job on time and on budget.

”

SEQ Water

“

Austrans planned and executed work on our sediment pond with no impact or interruption to our daily operations. The group removed 280 tonnes of heavy sludge and delivered it to disposal in just one day. Staff were helpful and organised, maximising our site's potential and working productively and efficiently without compromising safety, procedures and planning. With their experience, integrity and well-practiced methods we would not consider using anyone else.

”

Golden Cockerel

“

Australian Country Choice engaged Austrans to conduct a major refurbishment at our Brisbane Valley Feedlot facility, with the project involving bulk earthworks, drainage and roadworks.

The onsite Austrans team complied with our AS4801 health and safety requirements while achieving the budget and standard of workmanship required to meet our expectations. We will readily engage with Austrans to discuss future projects of this nature for our operations.
